We, Leanne Gail Robinson and William Leslie Rodee, the named inventors in the above identified patent application hereby declare:

The present inventors had marketed a product containing lactobacillus and an enzyme system. The composition was a trade secret. The ratio of digestive enzyme units to colony forming units is estimated to be 6.8 digestive enzyme units to 10×10^7 colony forming units based upon the input ingredients. The amount of enzyme per feeding was 2.7×10^3 digestive units per oz. (28.3 g). The date that the product first went on sale was 1995. The product was sold to a marketer as a digestive aid for dairy cattle. The marketer, located in Maryland, in turn sold the product to distributors and dealers in the northeast United States. This product was sold as a yeast product (*saccharomyces cerevisiae*) containing lactic bacteria (*Lactobacillus acidophilus*) and enzymes (amylase). We sold the rights to the product to the marketer and disposed of our records some time ago.

The yeast product was guaranteed to contain not less than 40×10^9 yeast cells, (10×10^9 being live yeast cells), 2.0×10^8 lactic cells (of that 5×10^8 were cfu/oz). The enzyme amylase was not guaranteed because of amount in the product was minute. If calculated it would amount to approximately 1568 BAU/oz. This yeast

product was fed at the rate of 1oz/head/day.
